

July 14, 2006

Tom,

Not sure whether we will keep Netflix. If we do, we may switch to the one-at-a-time plan. I've got the expiration date of our current subscription on my calendar.

Where did Clay learn so much about computers? What is Firefox, an operating system? Did Kelli lose her job?

I read that article about Scientology and the CIA. I've often wondered why the government lets them get away with so much. I thought it was because they got support from other religions (who were afraid the government would look at them next).

I bought a new camera. It is the Kodak EasyShare V610, which just came out in May. I got it for \$405 plus \$90 for a 1 GB memory card. It is 6.1 megapixel, 10x optical zoom - "the world's smallest 10x optical zoom digital camera". I can carry it in my pocket. It uses two lenses, so the lens doesn't protrude when you zoom. What I wasn't expecting is how great it is for video. With the 1 GB card, I can record videos over a half hour long, and the picture and sound are great. I'll send you one on a CD. And I can store 533 6-megapixel pictures.

Dad
